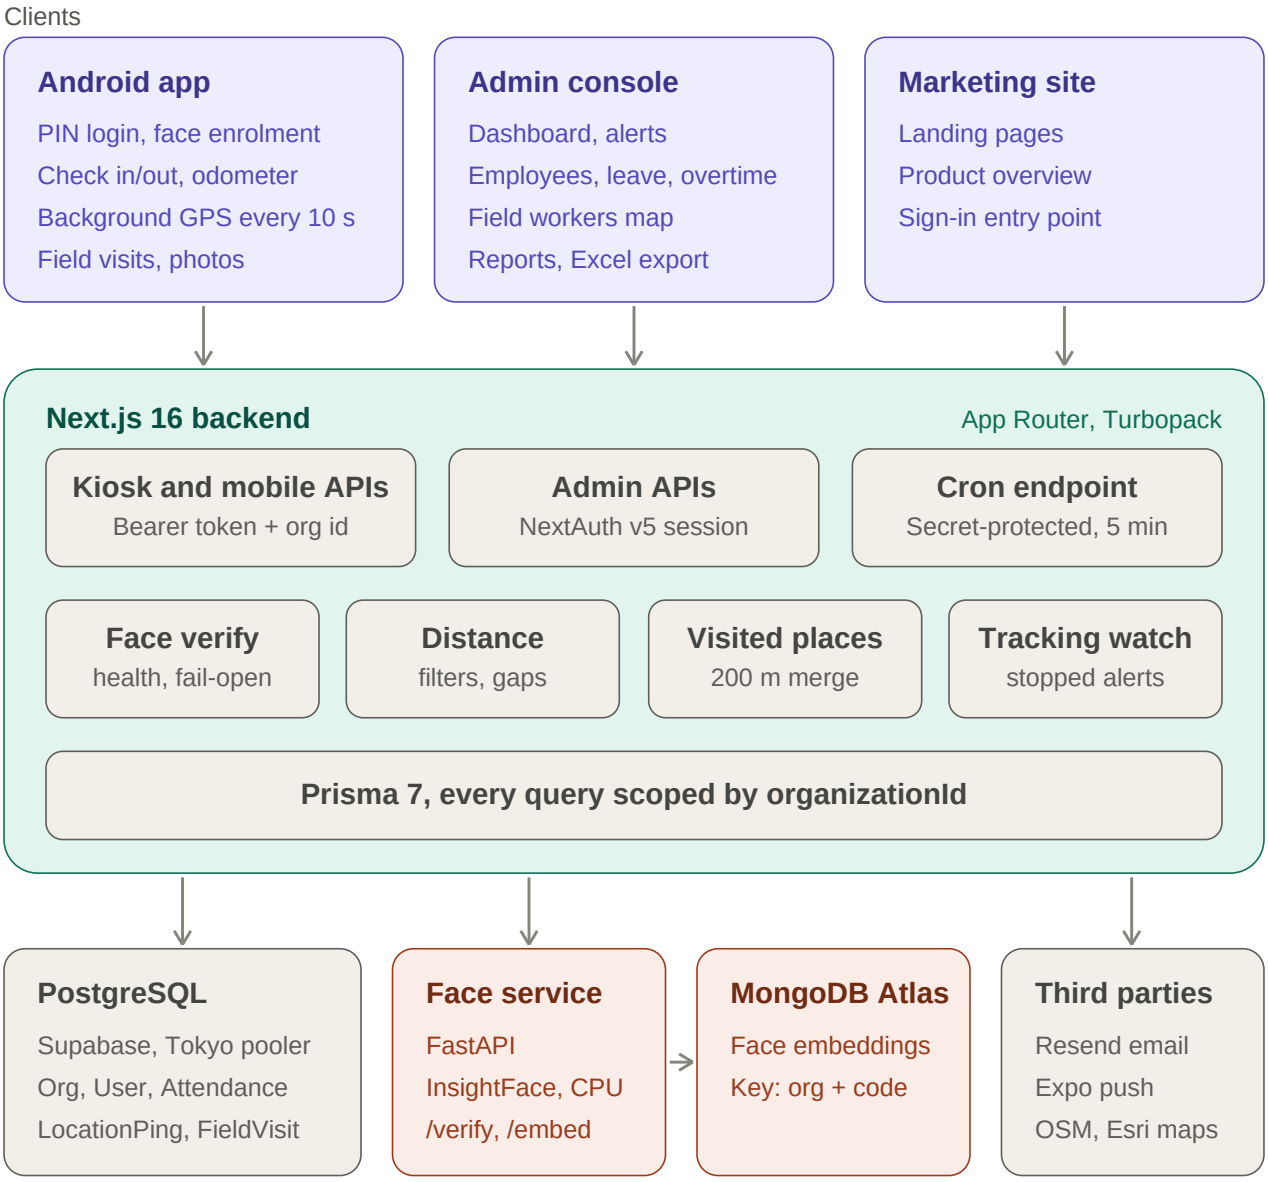
INZIVO ARCHITECTURE

System overview, end to end

Clients, the Next.js backend, data stores, third-party services and hosting.



INZIVO ARCHITECTURE

Office, WFH and field employees

One app, three work modes. The mode set on the employee decides the rules.

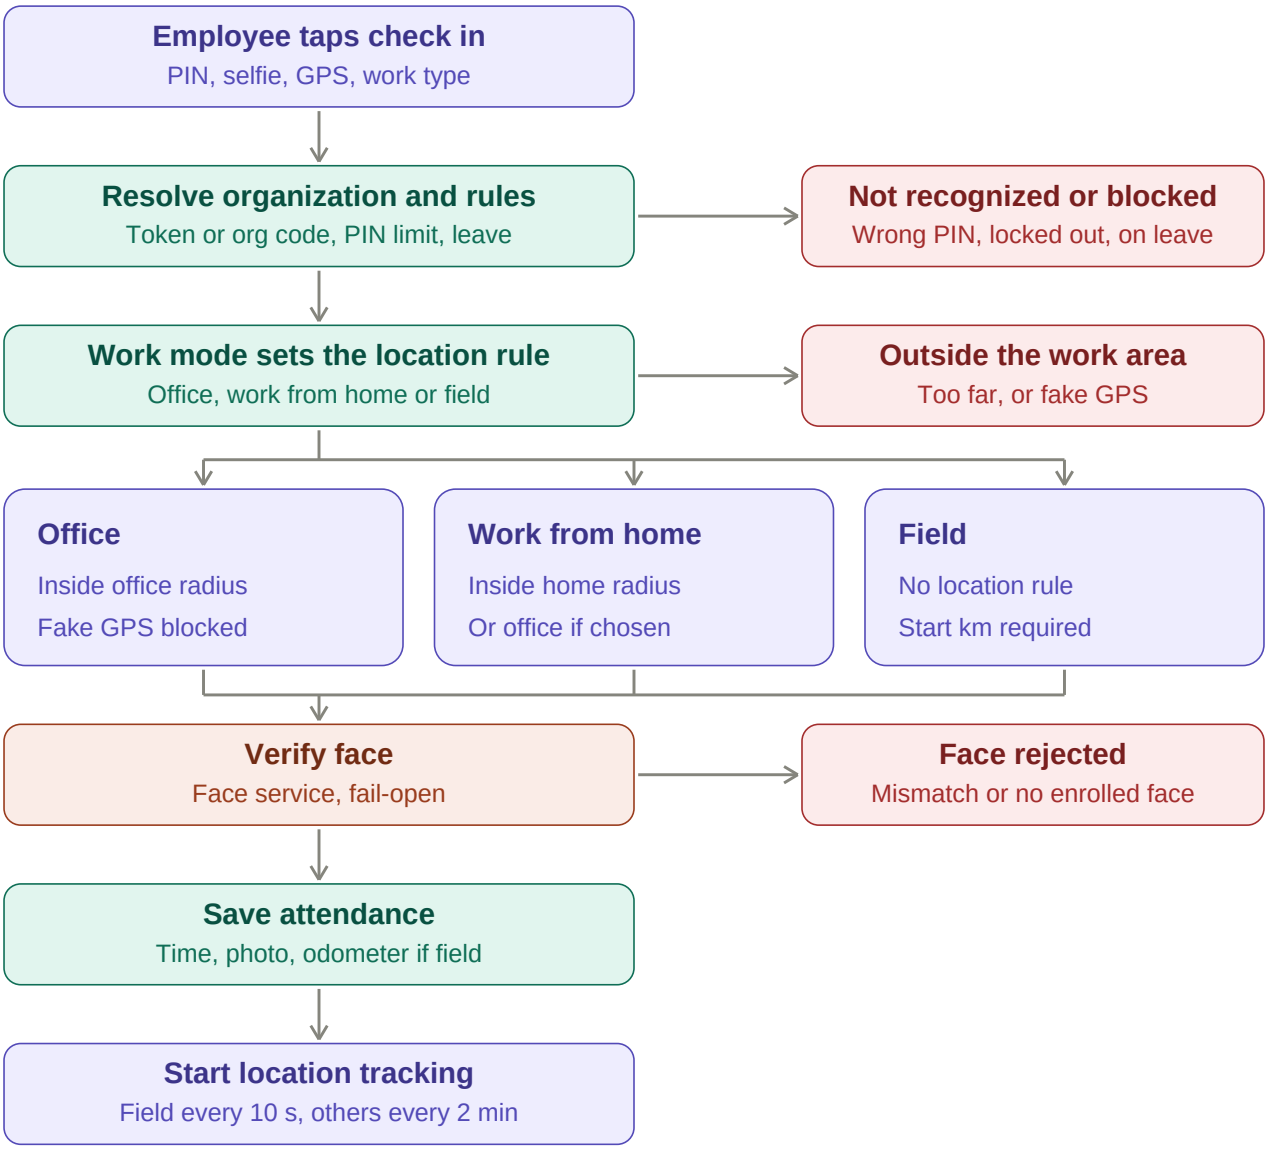
	Office	Work from home	Field
Location rule at check-in	Inside office radius	Inside home radius, or office if chosen	None, can be anywhere
Fake GPS apps	Blocked	Blocked	Not checked
Face check, PIN, leave	Same for all	Same for all	Same for all
Odometer	Not asked	Not asked	Start and end km
Location pings	Every 2 minutes	Every 2 minutes	Every 10 seconds, with route
Route on admin map	No	No	Yes, with visited places
Visit log with photo	No	No	Yes
Leaves the work area	Warning, pause after 10 min	Warning, pause after 10 min	No pause; switches Office or Field

A work-from-home or field employee can choose Office when checking in, and is then treated like an office employee that day.

INZIVO ARCHITECTURE

One check-in, step by step

The same path for every employee, with the location rule chosen by work mode.

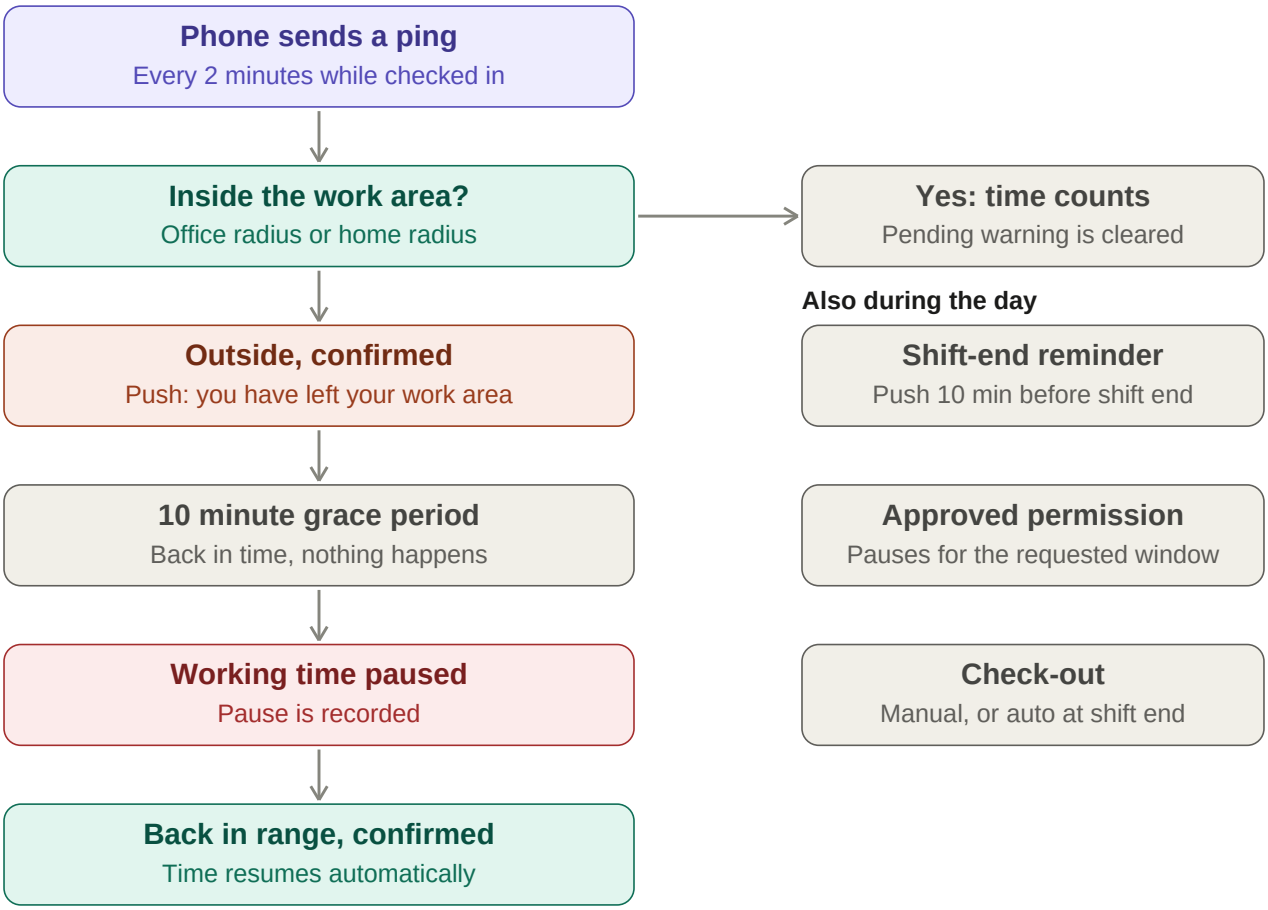


If the face service is unreachable, check-in still succeeds and the attempt is flagged for the admin.

INZIVO ARCHITECTURE

Office and work-from-home day

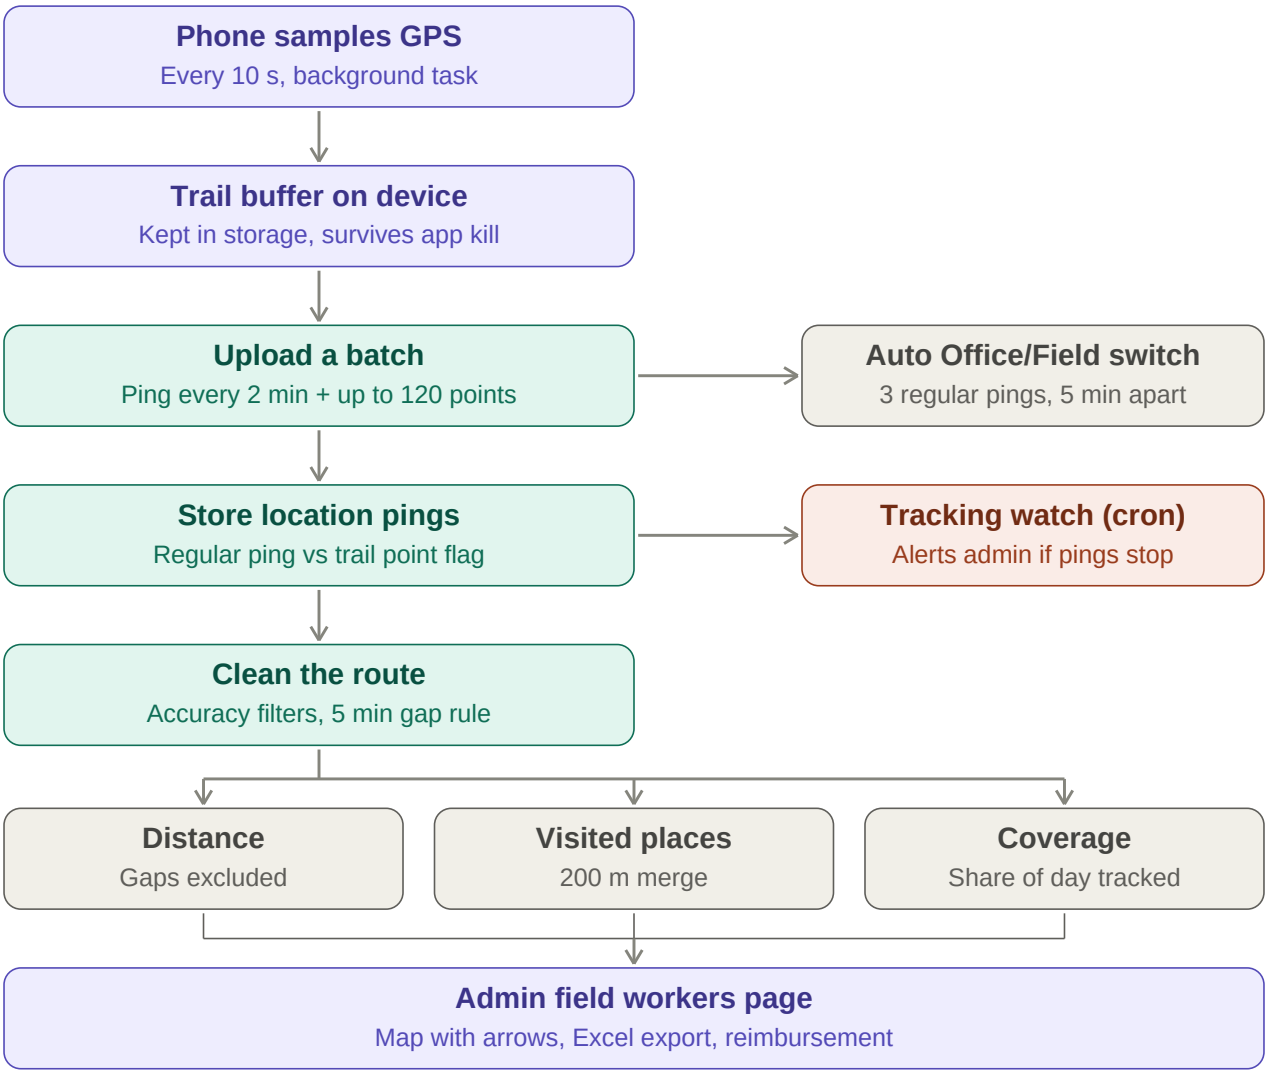
What the backend does with each location ping after check-in.



INZIVO ARCHITECTURE

Field tracking pipeline

How GPS samples from a field worker's phone become distance, visited places and the admin map.



Odometer start and end km are compared with tracked distance to give an accuracy percentage.
