INZIVO

PROJECT PORTFOLIO

# Attendance and field-force management platform

One platform for office, work-from-home and field teams: check-in with face verification, live route tracking, and everything an administrator needs in a single console.

**Prepared by the Inzivo team**

October 2026

OVERVIEW

# One platform for every kind of working day

Inzivo is a cloud-based attendance and field-force management platform for organisations with distributed teams. Each organisation runs in its own secure, isolated workspace: employees record attendance through a mobile app or a shared kiosk, and managers oversee operations from a central web console.

Office, remote and field employees are managed under one consistent set of policies. Verified check-ins, real-time location tracking and automated workflows give leadership an accurate, live view of the workforce, without manual follow-up.

## Admin Dashboard
WEB CONSOLE

WHO USES IT
**Owners, HR and managers**

WHERE IT RUNS
**Any desktop browser**

WHAT IT DOES

- Live team dashboard and alerts
- People, shifts, offices and settings
- Approve leave, overtime and permissions
- Manual entries for missed days
- Field maps, routes and assigned places
- Excel and CSV reports, API keys

## Employee Web App
MY PAGE

WHO USES IT
**Every employee**

WHERE IT RUNS
**Any browser, same sign-in as the app**

WHAT IT DOES

- Today's status and time so far
- Hours over the last 7 days
- Late marks this month and average start time
- Recent activity and an attendance calendar
- Change PIN and sign out
- View-only: check in with the app or kiosk

## Mobile App
ANDROID

WHO USES IT
**Employees, especially field staff**

WHERE IT RUNS
**Android phones**

WHAT IT DOES

- Check in and out with selfie, PIN and face match
- Leave, overtime and permission requests
- Background tracking and live working time
- Today's places with turn-by-turn navigation
- Visit log with photo, contact and remarks
- Reminders and alerts

All three talk to the same backend and database, so what an employee does is visible to the admin straight away. **Also part of the platform:** a shared kiosk check-in screen for each company, and a public API with keys for other systems.

THE BUSINESS CASE

# The Problem, and How Inzivo Solves It

Managing employee attendance shouldn't be complicated. Inzivo makes it simple.

1 PROBLEM

### Attendance is hard to manage

Employee attendance is recorded in registers, spreadsheets and WhatsApp messages. Collecting and checking these records takes time.

HOW INZIVO HELPS

### Accurate and reliable attendance

Employees check in and out using a PIN, photo and face verification, with location checks where applicable.

2 PROBLEM

### No clear proof of attendance

Managers may not know whether employees checked in at the correct place or arrived on time.

HOW INZIVO HELPS

### Know who checked in and where

Managers can view employee attendance and check-in details from the admin dashboard.

3 PROBLEM

### Field employees are difficult to track

Once employees leave the office, managers cannot easily see where they went, which places they visited or how far they travelled.

HOW INZIVO HELPS

### Track field visits and travel

View field workers' routes, visited places, travel distance and visit records from one place.

4 PROBLEM

### Working hours can be incorrect

Forgotten check-outs and missing records make it difficult to calculate the correct working hours.

HOW INZIVO HELPS

### Automatic attendance management

Reminders and automatic check-out help reduce missed check-outs and incorrect working-hour records.

5 PROBLEM

### Travel expenses are difficult to calculate

Managers often depend on employees' travel reports to calculate kilometres and travel reimbursements.

HOW INZIVO HELPS

### Calculate travel distance and reimbursement

Use GPS distance and odometer readings to help calculate travel kilometres and reimbursement.

6 PROBLEM

### Different teams use different systems

Office, work-from-home and field employees may use different methods to record attendance, making everything harder to manage.

HOW INZIVO HELPS

### One platform for every work mode

Manage office, work-from-home and field employees through one application and admin dashboard.

AUDIENCE

# Who Inzivo is for, and what each one gets

Each industry below lists the Inzivo features that cover its needs. Built for teams anywhere, with your own working rules and public-holiday calendar.

### FMCG and consumer goods

*Sales reps who visit dozens of shops a day*

INZIVO FEATURES THEY USE

- Today's shops assigned, sorted nearest-first
- Turn-by-turn navigation inside the app
- Visit log per shop: photo, contact person, order remarks
- Full route, km and time spent at each outlet
- Travel claims from odometer and GPS km

### Pharma sales

*Medical reps calling on doctors, chemists and hospitals*

INZIVO FEATURES THEY USE

- Planned call list of doctors and chemists
- Proof of every call: place, time, photo, contact
- Time spent at each call, arrival and departure
- Fake-GPS apps blocked, so visits are genuine
- Excel reports for area and regional managers

### Field service

*Installation and repair technicians at customer homes and sites*

INZIVO FEATURES THEY USE

- Assign the day's jobs as places on the map
- Navigation to each customer address
- Arrival time and time on site measured
- Job photos and remarks logged at each visit
- Distance-based travel reimbursement

### Maintenance

*Facility, AMC and equipment teams on scheduled rounds*

INZIVO FEATURES THEY USE

- Shifts per weekday for planned service rounds
- Service visits recorded with site photos as proof
- Overtime requests with a work summary and photo
- Tracking-stopped alerts if a phone goes silent
- Manual entry for a missed day, with audit trail

### Collections and recovery

*Banks and lenders with agents visiting customers*

INZIVO FEATURES THEY USE

- Every visit stamped with place, time and photo
- Contact person and remarks recorded per visit
- Day's route with numbered stops for review
- Fake-GPS blocked and face-verified check-in
- Excel report of up to 31 days for audits

### Surveys and research

*Agencies with enumerators in towns and villages*

INZIVO FEATURES THEY USE

- Survey points assigned on the map
- Offline check-in in low-signal areas, synced later
- Visit log with photo and respondent contact
- Places covered and distance for each day
- Light on data: under 1 MB a day for tracking

### Logistics and delivery

*Delivery staff and drivers on the road all day*

INZIVO FEATURES THEY USE

- Live route tracking with 10-second GPS points
- Distance within 98.4% of the vehicle odometer
- Start and end km; estimate if a reading is missed
- Rate per km, adjustable per person and day
- Alerts when a phone stops sending location

### Contract and customer-site staff

*Security, housekeeping and staff deployed at client sites*

INZIVO FEATURES THEY USE

- Face match stops proxy attendance
- Live-face check blocks a photo of another person
- Shared kiosk check-in screen at the site
- Shift reminders and automatic check-out
- One face can belong to only one employee ID

### Hybrid offices

*IT and corporate offices mixing on-site and remote work*

INZIVO FEATURES THEY USE

- Office area and a home location for each person
- Choose Home or Office each day
- Leave, overtime and permissions in the app
- My Page web view of hours and calendar
- Excel and CSV exports for payroll

INZIVO IN NUMBERS

# The product at a glance

## AI

**face verification**

Each check-in selfie is matched to the enrolled face; a liveness check blocks photos of another person

## < 1 MB

**mobile data a day**

Tracking for a full eight-hour field day

## 99%

**distance accuracy**

Measured at 98.4% against the vehicle odometer on a 135 km field trip

## 10 s

**field-worker tracking**

A GPS point every 10 seconds, sent in batches, records the true road route

## 2 min

**office and WFH staff**

Live location every 2 minutes for checked-in office and work-from-home staff, with low battery use

## Geofence

**check-in zones**

Office and home staff check in within a set radius; working time pauses if they leave it

## Anti-spoof

**location security**

Mock-location apps are detected and the check-in is rejected, re-verified on the server

## Offline

**data sync**

Check-ins and GPS route points are stored on the phone and synced when the signal returns

## 5 min

**automatic checks**

Every five minutes, it alerts employees and admins:

- Shift reminders
- Silent field-worker alerts
- Auto check-out if forgotten

## After shift

**check-out reminder**

Then checked out automatically at the shift end time

## Travel

**distance & reimbursement**

Calculated from GPS distance and odometer readings

## 3

**work modes**

Office, work from home and field, each with its own rules

## 15 s

**live requests**

New requests appear live; approve in one tap

## 500

**bulk upload**

Add a whole team from one spreadsheet

## 45 days

**photo retention (customisable)**

Photos are retained for 45 days by default. Each organisation can customise the retention period to suit its needs.

*Figures describe the product as built in October 2026. Distance accuracy and data use come from our own measured 135 km field trip.*

CAPABILITIES

# What each group of people gets

## Administrators

- **Live dashboard:** who is working, late, on leave or not in yet
- **Add people** one by one, or up to 500 at once from a spreadsheet
- **Shifts** per weekday, with office and home locations and geofence radius
- **Approve** leave, overtime and short permissions in one tap
- **Manual entries:** record a day the phone missed, with a reason and an audit trail
- **Alerts centre** for stopped tracking and missed face checks
- **Excel and CSV reports,** plus a public API with keys

## Employees

- **Check in and out** with a photo, PIN and face check
- **See** working time, leave balance, history and weekly hours
- **Request** leave, overtime or a short permission, and report an issue with a screenshot
- **Reminders** before the shift and when a check-in is missed
- **Automatic check-out** if they forget at the end of the shift
- **My Page on the web:** status, weekly hours, late marks and a calendar
- **Biometric unlock,** profile photo and change-PIN in the app

## Field teams

- **Background tracking** of the route, distance and places visited
- **Log each visit** with photo, contact person and remarks
- **Assigned places** in nearest-first order, with turn-by-turn directions in the app
- **Odometer** start and end, and reimbursement worked out from distance
- **Offline check-in** when there is no signal, synced later
- **Nearby** shops, schools and restaurants on the map
- **Automatic switch** between Field and Office when they reach the office

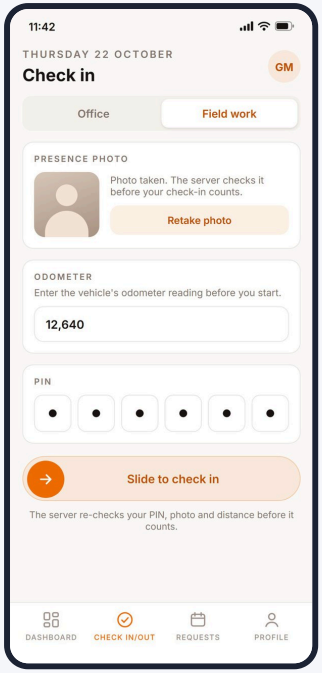

**Role-based by design**

Each person sees only the tools their role needs, and each company's data is kept separate from every other company's.

THE EMPLOYEE APP

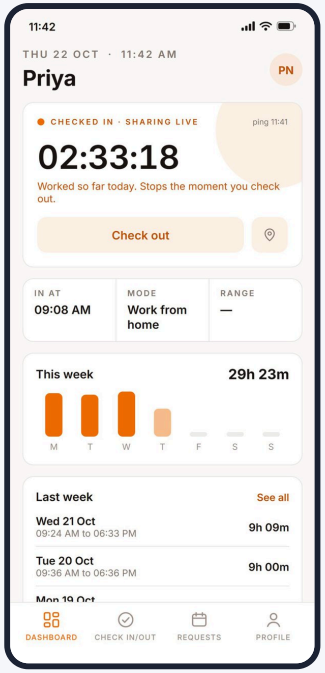

# The app, screen by screen

*Android app · illustrative screens drawn from the app's design with sample data*

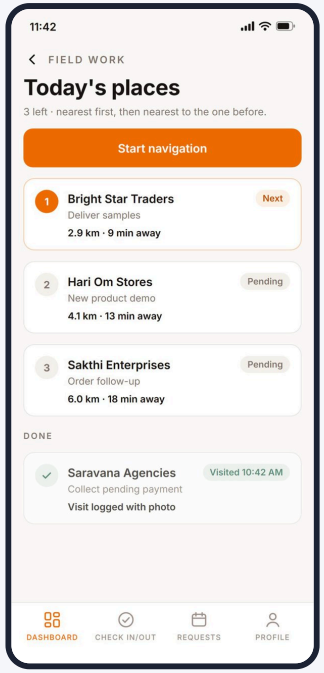

## Face-verified check-in

- Selfie matched to the enrolled face
- Liveness check blocks photos of another person
- Location verified against the work area
- Field workers add start and end km

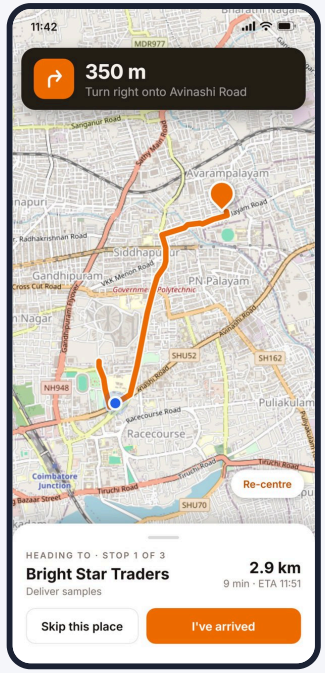

## Dashboard

- Live working time and distance to the office
- Leave balance, history and weekly hours
- Late and leave notices

## Today's places

- The day's stops, nearest first
- Re-orders after every stop
- Open the visit form, or skip with a reason

## Navigation

- Turn-by-turn directions inside the app
- Spoken prompts and automatic re-routing
- Arrival detected at each stop

**BEHIND THE SCENES**

**Background tracking**
A GPS point every 10 seconds for field workers and every 2 minutes for office and remote staff.

**Guided phone settings**
Checks location and battery settings and shows a Fix now prompt if tracking is at risk.

**Push notifications**
Shift reminders, leaving-the-area warnings, tracking alerts and automatic check-out notices.

SECURITY AND RELIABILITY

# Built to protect people's data and keep running

## Security

- **Secure connections:** HTTPS throughout, strict transport security, a content-security policy, clickjacking protection and no-sniff headers
- **Credentials:** passwords and PINs are stored only as bcrypt hashes; chosen PINs must be at least 6 digits
- **Brute-force protection:** per-person attempt limits (10 per 5 minutes, 30 per hour) shared by kiosk, app and web, plus per-address limits on sign-in, kiosk, password reset and other public endpoints
- **Sessions:** separate signing keys for web and mobile, 15-minute access tokens, refresh tokens that rotate and can be revoked, and sign-out everywhere in one step
- **Company isolation:** data access is scoped to the signed-in company, keeping each company's data separate
- **Presence integrity:** face verification, live-face check, geofence checks, mock-GPS rejection, and one check-in and check-out a day enforced by the database
- **Audit trail:** manual entries and permission decisions record who approved them and why
- **Safe data handling:** every request is validated, database access is parameterised; photos are type-checked, size-limited, resized and removed after the retention period each organisation chooses
- **Integrations:** API keys stored hashed, payment webhooks signature-checked, scheduler protected by a secret
- **Kept current:** dependencies audited and patched, with critical findings closed in October 2026

## Reliability and operations

- **Hosting:** AWS in the Mumbai region behind nginx, with the app under a process manager that restarts it automatically
- **Database:** managed PostgreSQL with connection pooling and per-process connection limits
- **Face verification** runs on the same server as a boot-time service. If it is ever unavailable, check-ins continue and are flagged for review instead of blocking work
- **Fast face checks:** the model is loaded once and face work runs in parallel, so one slow check never holds up the others
- **Health endpoint** reports database and face-service status for monitoring
- **Scheduler** runs every 5 minutes for auto check-out, shift reminders and tracking-stopped alerts
- **Offline check-in:** check-ins and unsent location points are kept on the phone and synced when the signal returns
- **Phone settings:** the app guides battery and location settings so tracking survives
- **Live admin screens:** new requests and alerts appear within about 15 seconds

STATUS

# Where things stand

## Delivered and operating

- Admin web console, Android app, employee web app (My Page), shared kiosk and public API
- Office, work-from-home and field workflows
- Face-verified check-in and geofencing
- Live field tracking, visit logging and assigned places with in-app navigation
- Automatic check-out, reminders and alerts
- Excel and CSV reports
- Manual attendance entries with approval and an audit trail
- Permissions history and a live view of who is on permission
- Shift weekdays and bulk assignment
- Refreshed admin console design and kiosk screen
- Payment gateway for plan sign-up
- Verified e-mail sending domain
- Live on AWS with security hardening in place
- Offline check-in that syncs when the signal returns
- Live-face check to block photos of another person

ROADMAP

# What comes after launch

## Next on the roadmap

### CHECK-IN AND LOCATIONS

- Multiple office and site locations, each with its own check-in radius
- iPhone version of the employee app

### FIELD WORK

- Forms and checklists to complete at each assigned place
- Expense claims with photos: tolls, parking, meals
- Live map of the whole field team at once

### ADMIN AND INTEGRATIONS

- Payroll export of attendance, overtime and leave
- Shift rotation and open shifts that staff can pick up
- Timesheets and hours per job or project
- Single sign-on and two-factor sign-in for admins

### EMPLOYEE APP

- Request a missed day to be added from the app
- Refinement of field tracking and the live map

**Thank you · Inzivo team · October 2026**
